Spring Core and Maven

1. pom.xml

```
<project xmlns="http://maven.apache.org/POM/4.0.0"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
http://maven.apache.org/xsd/maven-4.0.0.xsd">

<modelVersion>4.0.0</modelVersion>

<groupId>com.library</groupId>

<artifactId>LibraryManagement</artifactId>

<version>1.0</version>

<properties>

   <maven.compiler.source>1.8</maven.compiler.source>

   <maven.compiler.target>1.8</maven.compiler.target>

   <spring.version>5.3.30</spring.version>

</properties>

<dependencies>

   <dependency>

      <groupId>org.springframework</groupId>

      <artifactId>spring-context</artifactId>

      <version>${spring.version}</version>

   </dependency>

   <dependency>

      <groupId>org.springframework</groupId>
```

```
        <artifactId>spring-aop</artifactId>
        <version>${spring.version}</version>
    </dependency>

    <dependency>
        <groupId>org.springframework</groupId>
        <artifactId>spring-webmvc</artifactId>
        <version>${spring.version}</version>
    </dependency>

    <dependency>
        <groupId>org.aspectj</groupId>
        <artifactId>aspectjweaver</artifactId>
        <version>1.9.22</version>
    </dependency>

</dependencies>

<build>
    <plugins>
        <plugin>
            <groupId>org.apache.maven.plugins</groupId>
            <artifactId>maven-compiler-plugin</artifactId>
            <version>3.11.0</version>
            <configuration>
                <source>1.8</source>
                <target>1.8</target>
            </configuration>
```

```
      </plugin>
   </plugins>
</build>
</project>
```

2. BookRepository.java

```
package com.library.repository;

import org.springframework.stereotype.Repository;

@Repository
public class BookRepository {

public void display() {

   System.out.println("Book Repository Method Executed");

}

}
```

3. BookService.java

This demonstrates both **constructor injection** and **setter injection**.

```
package com.library.service;

import org.springframework.stereotype.Service;
import com.library.repository.BookRepository;

@Service
public class BookService {

private BookRepository bookRepository;

public BookService() {

}

public BookService(BookRepository bookRepository) {

   this.bookRepository = bookRepository;

   System.out.println("Constructor Injection Executed");

}
```

```
public void setBookRepository(BookRepository bookRepository) {
    this.bookRepository = bookRepository;
    System.out.println("Setter Injection Executed");
}

public void issueBook() {
    System.out.println("Book Service Method Executed");
    bookRepository.display();
}
}
```

4. LoggingAspect.java

```
package com.library.aspect;

import org.aspectj.lang.ProceedingJoinPoint;
import org.aspectj.lang.annotation.*;
import org.springframework.stereotype.Component;

@Aspect
@Component
public class LoggingAspect {

    @Before("execution(* com.library.service.*.*(..))")
    public void beforeMethod() {
        System.out.println("Before Method Execution");
    }

    @After("execution(* com.library.service.*.*(..))")
    public void afterMethod() {
        System.out.println("After Method Execution");
    }

    @Around("execution(* com.library.service.*.*(..))")
    public Object logExecutionTime(ProceedingJoinPoint joinPoint)
            throws Throwable {
```

```
        long start = System.currentTimeMillis();

        Object result = joinPoint.proceed();

        long end = System.currentTimeMillis();

        System.out.println(
                joinPoint.getSignature().getName()
                        + " executed in "
                        + (end - start)
                        + " ms");

        return result;
    }
}
```

5. applicationContext.xml

Create inside:

src/main/resources/applicationContext.xml

```
<?xml version="1.0" encoding="UTF-8"?>

<beans xmlns="http://www.springframework.org/schema/beans"
       xmlns:context="http://www.springframework.org/schema/context"
       xmlns:aop="http://www.springframework.org/schema/aop"
       xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"

       xsi:schemaLocation="
       http://www.springframework.org/schema/beans
       https://www.springframework.org/schema/beans/spring-beans.xsd

       http://www.springframework.org/schema/context
       https://www.springframework.org/schema/context/spring-context.xsd

       http://www.springframework.org/schema/aop
       https://www.springframework.org/schema/aop/spring-aop.xsd">

    <!-- Component Scan -->
    <context:component-scan base-package="com.library"/>
```

```
    <!-- Enable AOP -->
    <aop:aspectj-autoproxy/>

    <!-- Repository Bean -->
    <bean id="bookRepository"
        class="com.library.repository.BookRepository"/>

    <!-- Service Bean -->
    <bean id="bookService"
        class="com.library.service.BookService">

        <constructor-arg ref="bookRepository"/>
        <property name="bookRepository"
                ref="bookRepository"/>

    </bean>

</beans>
```

6. Main Class

```
package com.library;

import org.springframework.context.ApplicationContext;
import org.springframework.context.support.ClassPathXmlApplicationContext;

import com.library.service.BookService;

public class LibraryManagementApplication {

    public static void main(String[] args) {

        ApplicationContext context =
                new ClassPathXmlApplicationContext(
                        "applicationContext.xml");

        BookService service =
                context.getBean("bookService",
                        BookService.class);

        service.issueBook();
```

```
    }
}
```

Expected Output

Constructor Injection Executed
Setter Injection Executed

Before Method Execution

Book Service Method Executed
Book Repository Method Executed

issueBook executed in 0 ms

After Method Execution

Exercise 6 (Annotation Configuration)

Already completed using:

@Service
@Repository
@Aspect
@Component
<context:component-scan>

Exercise 9 — Spring Boot Application

Create using **Spring Initializr** with dependencies:

- Spring Web
- Spring Data JPA
- H2 Database

application.properties

```
spring.datasource.url=jdbc:h2:mem:testdb
spring.datasource.driverClassName=org.h2.Driver
spring.jpa.hibernate.ddl-auto=update
spring.h2.console.enabled=true
```

Book.java

```
package com.library.entity;
```

```
import jakarta.persistence.Entity;
import jakarta.persistence.Id;

@Entity
public class Book {

   @Id
   private int id;
   private String name;

   public Book() {
   }

   public Book(int id, String name) {
      this.id=id;
      this.name=name;
   }

   public int getId() {
      return id;
   }

   public void setId(int id) {
      this.id=id;
   }

   public String getName() {
      return name;
   }

   public void setName(String name) {
      this.name=name;
   }
}
```

BookRepository.java

```
package com.library.repository;

import org.springframework.data.jpa.repository.JpaRepository;
import com.library.entity.Book;
```

```
public interface BookRepository
      extends JpaRepository<Book,Integer> {
}
```

BookController.java

```
package com.library.controller;

import java.util.List;

import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.web.bind.annotation.*;

import com.library.entity.Book;
import com.library.repository.BookRepository;

@RestController
@RequestMapping("/books")
public class BookController {

   @Autowired
   private BookRepository repository;

   @PostMapping
   public Book addBook(@RequestBody Book book) {
      return repository.save(book);
   }

   @GetMapping
   public List<Book> getBooks() {
      return repository.findAll();
   }
}
```

Main Class

```
package com.library;

import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;

@SpringBootApplication
public class LibraryManagementApplication {
```

```
    public static void main(String[] args) {
        SpringApplication.run(
                LibraryManagementApplication.class,
                args);
    }
}
```

Testing

Add Book

POST http://localhost:8080/books

Body:

```
{
    "id":1,
    "name":"Spring Framework"
}
```

Get Books

GET http://localhost:8080/books
